

Flow

Main branch for ready solutions: master

Main branch for development: dev

Additional branches (for development): feature (large number, deletion after merging into develop):

- for feature development:

feature/US-{user_story_number}

- for bugs:

bugfix/US-{user_story_number}

- for hotfixes (bugs after deployment):

hotfix/US-{user_story_number}

Workflow:

1. Create master branch.
2. Create develop branch.
3. Create feature branch.
4. After feature development => dev => delete feature => PR to master.

Stack and tools

Frontend: Angular

Backend: C# 12, .Net 8.0.400

DataBase: PostgreSQL, MongoDB, Redis (for caching)

DevOps: git, trello, swagger, docker

Microsoft Visual studio 2022

Authorization / authentication: OAuth 2.0 / OpenID Connect

ORM: Dapper, EF.

Roles: Policy

Image: ImageSharp

Validation: Fluent Validation

Interaction with entities + pagination: AutoMapper, LINQ

Ticket creation PDF: QuestPDF

Emails sent: MailKit

ApiGateway: Ocelot

Message broker: RabbitMQ

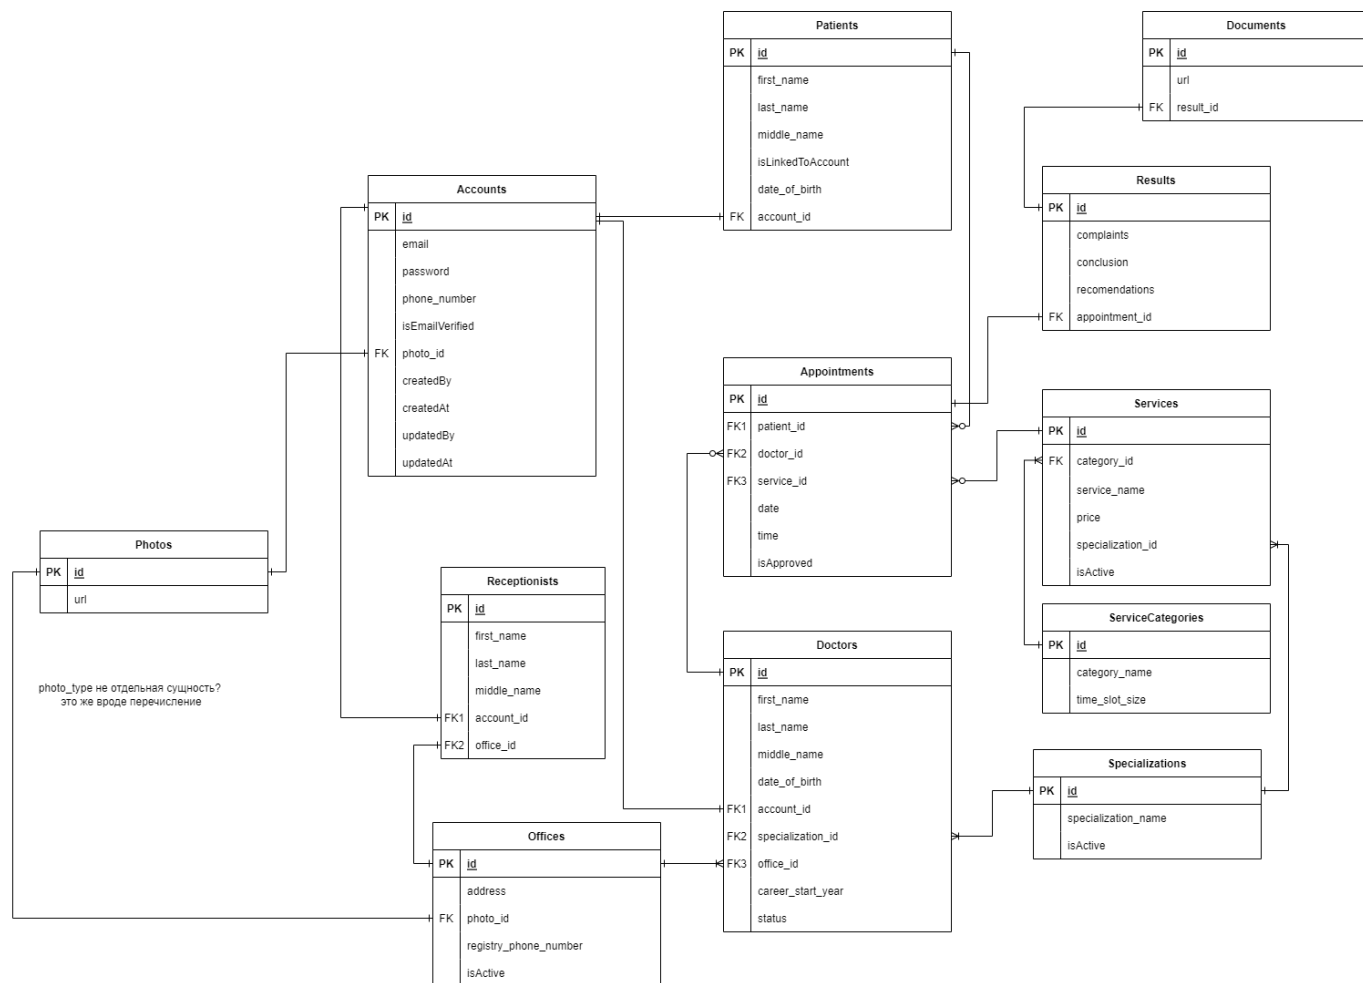

Interaction: CQRS

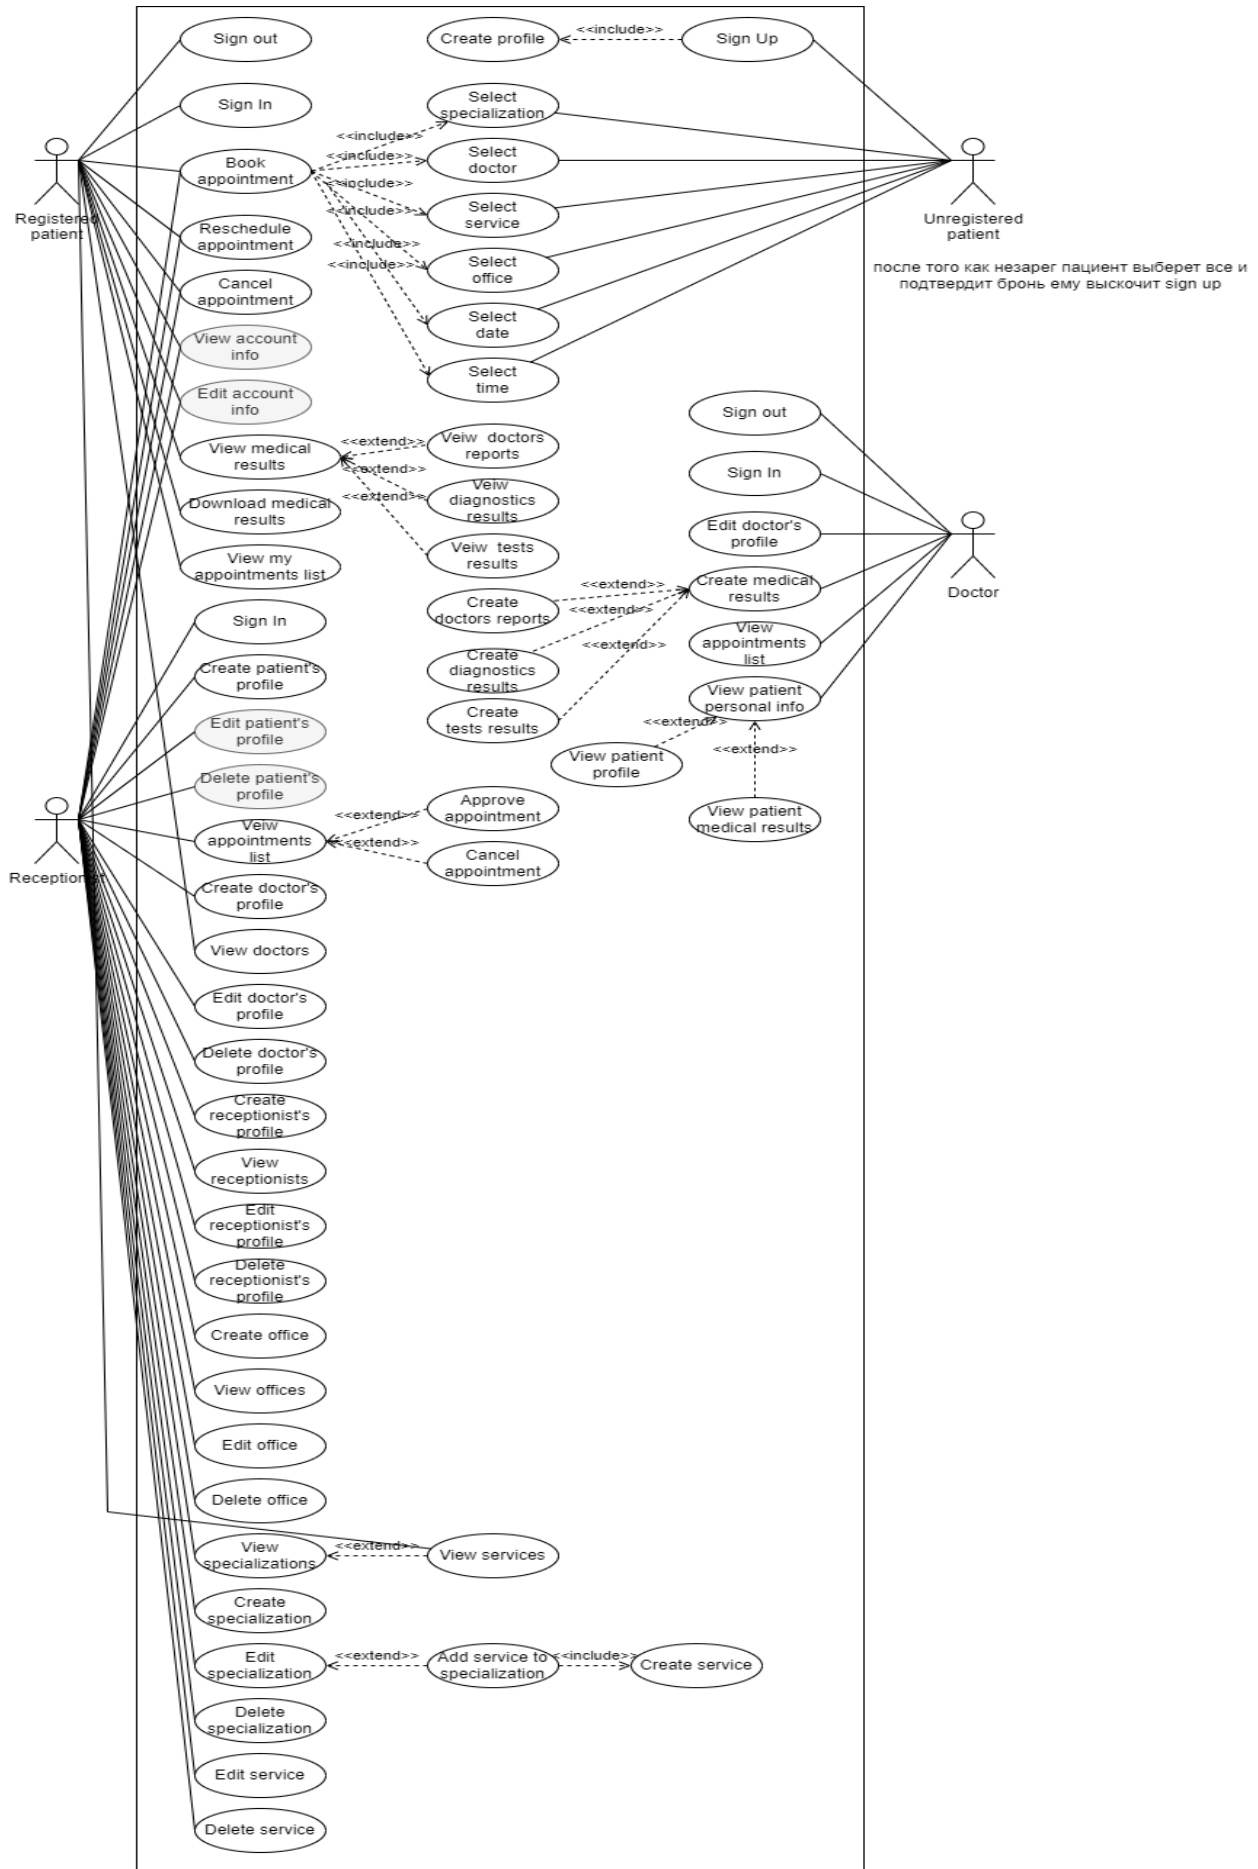

Logger: Serilog

Notifications: Hangfire

Front + back: SignalR

Tests: xUnit/integration, e2e

Learn information about doctors and services			Schedule the appointment		Manage the account		Manage the appointment and results	
Check doctors	Check services	Make a request	Choose time and date	Make an appointment	Manage the account	Manage account info	Manage the appointment	Manage the appointment results
1 View doctors list	1 View services list	1 Select doctor	1 View timeslots	1 Make an appointment	1 Sign up	2 View patient's profile (patient + doctor)	2 View appointment schedule by patient	2 View medical history (patient + doctor)
